Zukunftstag/Girls' Day on April 23, 2026, made a dream come true for an 11-year-old pupil. Thanks to the opportunities provided by the Collaborative Research Center SFB1565, she was able to spend a day immersed in the fascinating world of scientific research.

Guided by experienced researchers and technical staff, she gained first-hand insight into the diverse daily activities of a molecular biology laboratory. More than just observing, she actively participated in laboratory work, experiencing the excitement of scientific discovery for herself.

Throughout the day, she learned how scientific experiments are carefully designed and carried out step by step.

She discovered that successful research requires meticulous planning, preparation, and attention to detail. As illustrated in the accompanying images, even seemingly routine tasks—such as preparing laboratory buffers—are essential building blocks that contribute to obtaining meaningful scientific results.

Programs such as Girls' Day play a vital role in inspiring the next generation of scientists. By opening laboratory doors to young students, they help spark curiosity, and demonstrate that science is creative and rewarding.
